| Street Address 2 | | | | Gender Male |
| City/County Washington | State DC | ZIP 20500 | | |

Patient Information

No patient information supplied.

Details of Report

Dr. Sean Conley, D.O., appears to have violated the terms of the medical license issued to him on July 2007 by the Commonwealth of Virginia and should have his licensed revoked. According to the Code of Virginia § 54.1-2915, a medical license may be revoked for acts of "unprofessional

conduct" that include: • "Performing any act likely to deceive, defraud, or harm the public." • "Conducting his practice in such a manner as to be a danger to the health and welfare of his patients or to the public." In the period preceding President Trump's COVID-19 diagnosis on Oct. 1, Dr. Conley, who serves as White House Chief Medical Advisor and physician to the president, could have demanded that guidelines from the Centers for Disease Control and Prevention to prevent the spread of the coronavirus in the White House be strictly enforced. To protect his medical license, he could have made it clear that he would not endanger the health and welfare of his patient or the public. He could have resigned. But Dr. Conley did not. No less a figure than Senate Majority Leader Mitch McConnell has refused to visit the White House since Aug. 6, due to its cavalier attitude toward the virus. According to an internal government memo distributed among senior leadership at FEMA, a branch of the Department of Homeland Security, and obtained by ABC News, the outbreak has infected "34 White House staffers and other contacts" in recent days. It was recently announced two additional White House residence staff have tested positive for coronavirus, bringing the total to four. They include three members of the housekeeping staff, as well as an usher. Since the President was diagnosed with COVID-19, Dr. Conley could have spoken frankly about the president's symptoms, treatment and prognosis. But he did not. Instead, Dr. Conley has provided deliberately misleading information to the nation and the world about President Trump's health and treatment. By doing so, he has violated his medical license by "Performing any act likely to deceive, defraud, or harm the public." On Oct. 4, President Trump rode in his limousine around Walter Reed Army Medical Center to wave to supporters. This violated isolation guidance from the CDC. The President's ride risked the lives of Secret Service personnel in the vehicle – as well as their families and friends. Dr. Conley admitted on October 4th to omitting critical details about the seriousness of President Trump's condition by saying he was "trying to reflect the upbeat attitude" of the team and the President. Conley also added that he "... didn't want to give any information that might steer the illness in another direction." Checks and Balances Project is unclear how leaving out important details about a presidential health condition in a public briefing would magically "steer the illness in another direction." But it is abundantly clear that refusing to protect the health and welfare of his patient and the public to enforce the wearing of masks and social distancing inside the White House enabled the disease to spread among nearly three dozen people. On Oct. 5, President Trump returned to the White House and dramatically removed his mask. Five days later, Dr. Conley declared in an official memo that President Trump is "not infectious to others." We are glad that the President of the United States has so far recovered. But he received a cocktail of three major medications to attack his infection, one of which is experimental and not available to the public and the dedicated resources of Walter Reed. "It's just a lot of understandable mixed signals, that it's either serious or it's not serious," said Dr. Anthony Fauci. "It's deadly or it's not deadly. To me, that's been the bane of trying to get a message across to people." Meanwhile, 217,000 people have died so far of the disease in the U.S. and the numbers are rising. (See attachment for complete complaint.)

You may attach supporting documentation below.

If you'd like to attach supporting documentation, you may do so below. We accept up to ten(10) PDF documents, Microsoft Word Documents, or pictures(gif, bmp, png, or jpg) with a maximum file size of 8Mb. As you add the documents a green dot should appear next to the file. If you see a red dot then that file doesn't meet the criteria for a valid file.
